Because APPLE MACs are so safe, there are a lot of security features that prevent third party software installation, HikVision iVMS-4200.

To install iVMS-4200, first download the latest version from:

After downloading, open the “RECENT DOWNLOADS” (it looks like an arrow pointed downwards on the top right corner of SAFARI browser)

![Figure 1](image_url)

After opening the “RECENT DOWNLOADS”, double-click on downloaded iVMS-4200 (See Figure 2)
As soon as it’s launched, an **ERROR/WARNING** message will pop-up (see Figure 3 on next page)

![Figure 2](image)

**Figure 2**

![Figure 3](image)

**Figure 3**

**“IVMS-4200(v1.02).pkg” can’t be opened because it is from an unidentified developer.**

Your security preferences allow installation of only apps from the Mac App Store and identified developers. Safari downloaded this file today at 11:33 AM from www.hikvision.com.

OK
This is a result of APPLE security settings being set to accept APPs or Programs, only from APPLE’S APP STORE, or “IDENTIFIED DEVELOPERS”. Here is a way to bypass it:
Open “System Preferences” (the icon looks like a gear. See Figure 4)

![Figure 4](image-url)

After going to “System Preferences”, locate and click on “SECURITY AND PRIVACY” (Figure 5).
This menu will allow modification of the security parameters of the computer, to allow installation of APPS and PROGRAMS from any publisher.
The circled area shows the restrictions to install or run any APPs or Programs downloaded from any source but the **APP STORE**.

As shown, the area is “greyed out” (cannot change the values/settings). To unlock this feature, click on the **LOCK** icon on the bottom left corner.

This operation will require the computer owner’s username and password. There is no default or backdoor password. This password has been set by the owner when this computer was powered for the first time (See figure 7 and Figure 8).
After entering the password, the abovementioned area (Figure 6) will become available for making changes. Check the “ANYWHERE” option (Figure 9).

![Figure 9](image)

After selecting the “ANYWHERE” option, a prompt will pop-up asking to “ALLOW FROM ANYWHERE” or to “CANCEL”. Select “ALLOW FROM ANYWHERE” (Figure 10).

![Figure 10](image)

After all these steps have been taken, install the software by clicking “CONTINUE” when prompted (Figure 11). The user may be prompted for the owner’s password once again.
After the software is successfully installed, the software will appear in the “APPLICATIONS” folder (Figure 12, 13, 14).
