Legal Disclaimer

TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, THE PRODUCT DESCRIBED, WITH ITS HARDWARE, SOFTWARE AND FIRMWARE, IS PROVIDED “AS IS”, WITH ALL FAULTS AND ERRORS, AND HIKVISION MAKES NO WARRANTIES, EXPRESS OR IMPLIED, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY, SATISFACTORY QUALITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF THIRD PARTY. IN NO EVENT WILL HIKVISION, ITS DIRECTORS, OFFICERS, EMPLOYEES, OR AGENTS BE LIABLE TO YOU FOR ANY SPECIAL, CONSEQUENTIAL, INCIDENTAL, OR INDIRECT DAMAGES, INCLUDING, AMONG OTHERS, DAMAGES FOR LOSS OF BUSINESS PROFITS, BUSINESS INTERRUPTION, OR LOSS OF DATA OR DOCUMENTATION, IN CONNECTION WITH THE USE OF THIS PRODUCT, EVEN IF HIKVISION HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

REGARDING TO THE PRODUCT WITH INTERNET ACCESS, THE USE OF PRODUCT SHALL BE WHOLLY AT YOUR OWN RISKS. HIKVISION SHALL NOT TAKE ANY RESPONSIBILITES FOR ABNORMAL OPERATION, PRIVACY LEAKAGE OR OTHER DAMAGES RESULTING FROM CYBER ATTACK, HACKER ATTACK, VIRUS INSPECTION, OR OTHER INTERNET SECURITY RISKS; HOWEVER, HIKVISION WILL PROVIDE TIMELY TECHNICAL SUPPORT IF REQUIRED.

SURVEILLANCE LAWS VARY BY JURISDICTION. PLEASE CHECK ALL RELEVANT LAWS IN YOUR JURISDICTION BEFORE USING THIS PRODUCT IN ORDER TO ENSURE THAT YOUR USE CONFORMS THE APPLICABLE LAW. HIKVISION SHALL NOT BE LIABLE IN THE EVENT THAT THIS PRODUCT IS USED WITH ILLEGITIMATE PURPOSES.

IN THE EVENT OF ANY CONFLICTS BETWEEN THIS MANUAL AND THE APPLICABLE LAW, THE LATER PREVAILS.
Regulatory information

FCC information

Please take attention that changes or modification not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

**FCC compliance:** This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

**FCC conditions**

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference.
2. This device must accept any interference received, including interference that may cause undesired operation.

**EU Conformity Statement**

This product and - if applicable - the supplied accessories too are marked with "CE" and comply therefore with the applicable harmonized European standards listed under the EMC Directive 2014/30/EU, the LVD Directive 2014/35/EU, the RoHS Directive 2011/65/EU.

2012/19/EU (WEEE directive): Products marked with this symbol cannot be disposed of as unsorted municipal waste in the European Union. For proper recycling, return this product to your local supplier upon the purchase of equivalent new equipment, or dispose of it at designated collection points. For more information see: [www.recyclethis.info](http://www.recyclethis.info)

2006/66/EC (battery directive): This product contains a battery that cannot be disposed of as unsorted municipal waste in the European Union. See the product documentation for specific battery information. The battery is marked with this symbol, which may include lettering to indicate cadmium (Cd), lead (Pb), or mercury (Hg). For proper recycling, return the battery to your supplier or to a designated collection point. For more information see: [www.recyclethis.info](http://www.recyclethis.info)

**Industry Canada ICES-003 Compliance**

This device meets the CAN ICES-3 (A)/NMB-3(A) standards requirements.

Safety Instructions

- Proper configuration of all passwords and other security settings is the responsibility of the installer and/or end-user.
- In the use of the product, you must be in strict compliance with the electrical safety regulations of the nation and region. Please refer to technical specifications for detailed information.
- Input voltage should meet both the SELV (Safety Extra Low Voltage) and the Limited Power Source with 100 to 240 VAC or 12 VDC according to the IEC60950-1 standard. Please refer to technical specifications for detailed information.
- Do not connect several devices to one power adapter as adapter overload may cause overheating or a fire hazard.
- Please make sure that the plug is firmly connected to the power socket.
- If smoke, odor or noise rise from the device, turn off the power at once and unplug the power cable, and then please contact the service center.

Preventive and Cautionary Tips

Before connecting and operating your device, be advised of the following tips:

- Ensure unit is installed in a well-ventilated, dust-free environment.
- Unit is designed for indoor use only.
- Keep all liquids away from the device.
- Ensure environmental conditions meet factory specifications.
- Ensure unit is properly secured to a rack or shelf. Major shocks or jolts to the unit as a result of dropping it may cause damage to the sensitive electronics within the unit.
- Use the device in conjunction with an UPS if possible.
- Power down the unit before connecting and disconnecting accessories and peripherals.
- Improper use or replacement of the battery may result in explosion. Replace with the same or equivalent type only. Dispose of used batteries according to the instructions provided by the battery manufacturer.

Chapter 1 Introduction

1.1 Description

Designed for the high-definition video monitoring system, DS-6900UDI Decoder is developed on the basis of embedded hardware platform, ensuring high reliability and stability of system running.

DS-6900UDI Decoder is capable of simultaneous decoding video for 16-ch@12MP, 32-ch@8MP, 48-ch@5MP, 80-ch@3MP, 128-ch@1080p simultaneous decoding, and outputting decoded video via BNC, VGA, or HDMI interfaces, and it also supports multiple video stream formats like H.265, H.264+, H.264 and MPEG4. The decoded video can be displayed on video wall or large screen.

1.2 Features

Powerful Decoding Capability

- DS-6901UDI provides HDMI, VGA, and BNC output interfaces.
- Up to 16-ch decoding at 12 MP resolution (DS-6916UDI).
- DS-6904UDI, DS-6908UDI, DS-6910UDI, DS-6912UDI, DS-6916UDI provide HDMI (adaptable to DVI-D) and BNC output interfaces.
- Up to 4K (3840 × 2160@30 Hz) via HDMI interface (only for even interface), and up to 1080p@60Hz via VGA interface.
- PS, RTP, TS, ES, HIK encapsulation formats.
- Supports window opening and window roaming.
- Supports two-window division mode.
- You can double click the roaming window to zoom in or out for one roaming window or divided roaming sub-window.
- Three encoding levels: baseline, main, and high-profile.
- Accessible by panoVu network camera.
- Accessible by thermal network camera and you can view the temperature measurement, dynamic fire source detection, ship detection and VCA information in live view and playback.
- You can enable or disable the smart information for the thermal network camera.

Multiple Decoding Control Modes

- Two decoding modes: active decoding and passive decoding.
- Decoding output of remote video files.
Decoding on video wall by directly linking cameras or by stream media forwarding.

- Gets stream and decodes via URL.
- Remotely controls PTZ of DVR or DVS via transparent channel.
- Two-way audio.
- Supports multi-screen control with PC installed with RSC server.
- Supports Wi-Fi module access to display the signal from IOS/Android mobile phone or pad on video wall.

- Wi-Fi can be enabled via the Web browser or client software. You can get stream and decode the video on the video wall when Wi-Fi is enabled if no wired network can be accessed.
- Configurable LED width and height parameters when the LED is connected.
- Regular and irregular virtual screen configurable to display multiple signal sources and get rid of the restriction of physical screen.
- LCD output type configurable for the BNC and VGA outputs; LCD and LED output types configurable for HDMI outputs.
- You can configure what the video wall show when decoding ends and streaming fails via the Web browser and client software.
- Auto-switch of sub-stream configurable via the Web browser and client software.

Integrated Capability

- Decoding video/audio stream accessed by ONIVF, RTP/RTSP protocols.
- Provides complete software development kit (SDK) for third-party developers.
- Port link aggregation technology (Ethernet Channel).

Maintenance Management

- Remotely get, configure, export and import parameters.
- Remotely reboot, restore default settings and upgrading via web browser or client software.

**NOTE**

DS-6910UDI provides 10 HDMI output interfaces, DS-6912UDI provides 12 HDMI output interfaces and other interfaces are the same with DS-6916UDI.
Chapter 3 Device Activation

Purpose
You are required to activate the decoder first by setting a strong password for it before you can use the device. And you can configure the basic network parameters. Activation via Web Browser and Client Software are all supported.

Note
For the first-time user, the default user name of DS-6900UDI is admin, and the default IP address is 192.0.0.64.

3.1 Activating via SADP Software
SADP software is used for detecting the online device, activating the camera, and resetting the password.
Get the SADP software from the supplied disk or the official website, and install the SADP according to the prompts. Follow the steps to activate the camera.

Step 1 Run the SADP software to search the online devices.
Step 2 Check the device status from the device list, and select the inactive device.

![SADP Interface](image)

Step 3 Create a password and input it in the password field, and confirm the password.
Step 4 Click Activate to activate the device.
STRONG PASSWORD RECOMMENDED—We highly recommend you create a strong password of your own choosing (Using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers, and special characters.) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

Step 5 Change the device IP address to the same subnet with your computer by either modifying the IP address manually or checking the checkbox of Enable DHCP.

![Modify Network Parameters](image)

Figure 3-2 Modify the IP Address

Step 6 Input the password and click the **Modify** button to activate your IP address modification.

### 3.2 Activating via Web Browser

Step 1 Power on the decoder, and connect the decoder to the network.

Step 2 Input the IP address into the address bar of the web browser, and click Enter to enter the activation interface.
Step 3 Create a password and input the password into the password field.

WARNING

STRONG PASSWORD RECOMMENDED—We highly recommend you create a strong password of your own choosing (Using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers, and special characters.) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

Step 4 Confirm the password.

Step 5 Click OK to save the password and enter the live view interface.

3.3 Activating via Client Software

The client software is versatile video management software for multiple kinds of devices.

Get the client software from the supplied disk or the official website, and install the software according to the prompts. Follow the steps to activate the camera.

Step 1 Run the client software and the Video Wall interface pops up, as shown in the figure below.
Step 2 Click the **Device Management** icon to enter the Device Management interface, as shown in the figure below.

![Control Panel](image1)

**Figure 3-4 Control Panel**

Step 3 Check the device status from the device list, and select an inactive device.

Step 4 Click the **Activate** button to pop up the Activation interface.

Step 5 Create a password and input the password in the password field, and confirm the password.
**WARNING**

STRONG PASSWORD RECOMMENDED—We highly recommend you create a strong password of your own choosing (Using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers, and special characters.) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

---

**Step 6** Click **OK** button to start activation.

**Step 7** Click the **Modify Netinfo** button to pop up the Network Parameter Modification interface, as shown in the figure below.

---

**Step 8** Change the device IP address to the same subnet with your computer by either modifying the IP address manually or checking the **DHCP** checkbox.

**Step 9** Input the password to activate your IP address modification.
Chapter 4 Network Configuration

NOTE
You shall acknowledge that the use of the product with the Internet access might be under network security risks. For avoidance of any network attacks and information leakage, please strengthen your own protection. If the product does not work properly, contact with your dealer or the nearest service center.

Purpose
You shall configure the basic network, DDNS, and Wi-Fi settings before other operations. In this chapter, the network configuration of the decoder by the Web browser is provided.

NOTE
The tested Web browsers include: IE 8.0+, Chrome 18.0+, Firefox 5.0+, and Safari 5.02+.

Step 1 Open the Web browser and input the IP address of Decoder (e.g., http://192.168.0.0).
Step 2 Log in to the device.

![Login Interface](image)

Figure 4-1 Login Interface

- If the device has not been activated, you need to active the device first before login.

![Activation Interface](image)

Figure 4-2 Activation Interface
WARNING

**STRONG PASSWORD RECOMMENDED**—We highly recommend you create a strong password of your own choosing (Using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers, and special characters.) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

- If the device is already activated, input the user name and password in the login interface, and click the **Login** button.

The following interface is shown after successful login.

![Figure 4-3 Enter Web Page](image)

4.1 Configuring Basic Network Settings

*Purpose*

You can set the network parameters for the decoder in the parameter configuration interface.

Step 1 Click **Configuration > Network > TCP/IP** to enter the general network settings interface.
Configure Basic Network Settings

Step 2 Set the network parameters, including the NIC, IP Address, Subnet Mask, Gateway, and DNS Server.

**NOTE**

The DS-6904/6908/6910/6912/6916UDI provides multiple NICs for selection.

Step 3 Click **Save** to save the settings.

### 4.2 Configuring DDNS Settings

**Purpose**

If your device is set to use PPPoE as its default network connection, you may set Dynamic DNS (DDNS) to be used for network access.

Prior registration with your DDNS Provider is required before configuring the system to use DDNS.

Step 1 Click **Configuration > Network > DDNS** to enter the DDNS Settings interface.

Step 2 Check the **Enable DDNS** checkbox to enable this function.

Step 3 Select **DDNS Type**. Four different DDNS types are selectable: IPServer, DynDNS, PeanutHull, and NO-IP.

- **DynDNS**
  1. Enter **Server Address** for DynDNS (e.g., members.dyndns.org).
  2. Enter the **UserName** and **Password** registered in the DynDNS website.
  3. In the **Domain** text field, enter the domain obtained from the DynDNS website.
  4. Click **Save** to save the settings.
1. Enter server address for IPServer.
2. Click **Save** to save the settings.

**NOTE**

For the IP Server, you have to apply a static IP, subnet mask, gateway and primary DNS from the ISP. The **Server Address** should be entered with the static IP address of the PC that runs IP Server software.
4.3 Configuring Wi-Fi Settings

**Purpose**

The Wi-Fi can be used as the supplement of the wired network. You can get stream and decode the video on the video wall when Wi-Fi is enabled if no wired network can be accessed.

**Step 1** Click **Configuration > Network > Wi-Fi** to enter the Wi-Fi Settings interface.
Step 2 You can view the Wireless List on the interface. Click **Search** button to search the available wireless network. The SSID, Security Mode, Signal Strength and Connection Status are shown in the list.

**NOTE**

Up to 20 Wi-Fi can be listed.

Step 3 Select one from the wireless list.

Step 4 Check the checkbox of **Enable Wi-Fi** to enable the selected Wi-Fi.

Step 5 You can view the **Security Mode** and other parameters.

- **Not-Encrypted**
  
  The Wi-Fi is not encrypted and can be accessed randomly.

![Wi-Fi Settings (1)](image)

**Figure 4-9 Wi-Fi Settings (1)**

- **WEP**
  
  1. For the **Authentication** type, open and shared are selectable. With the open system authentication, key authentication is not needed for connecting the Wi-Fi. With the shared system authentication, the key must be matched with the preset access point key.
  2. For the **Key Length**, 64 bit, 128 bit and 152 bit are selectable.
  3. For the **Key Type**, HEX and ASCII are selectable.
  4. Select one **Key** for activation. 4 keys can be selected. Input the key.
1. For the **Encryption Type**, TKIP and AES are selectable.
2. Input the **Key**.

**WPA2-Personal**

Refer to the configuration of WPA-Personal for reference.

**Step 6** Click **Save** button to save the settings and the following note window pops up. Click **OK** to reboot the device and enter the Wi-Fi mode.
Step 7 (Optional) Uncheck the checkbox of **Enable Wi-Fi** and click **Save** to save the settings. The following note window pops up. Click **OK** to reboot the device and exit from the Wi-Fi mode.

**NOTE**

- If wired network cable is connected to the device when the Wi-Fi is enabled, wired network will be connected by priority. But the decoding capability will conform to the configuration in the Wi-Fi mode.
- In Wi-Fi mode, up to 16 channels can be decoded with up to 1080p resolution of each channel and the maximum bandwidth is 64 Mbps.
Chapter 5 Decoding Parameters Configuration

5.1 Configuring Stream Settings

*Purpose*

The stream configuration refers to the auto stream switch between main stream and sub-stream.

**Step 1** Click **Configuration > Decoding Configuration > Stream Configuration** to enter stream configuration interface.

![Stream Configuration Interface](image)

*NOTE*

When a screen is split into more than 16 windows, the main stream will automatically switch to sub-stream to lower the bandwidth.

5.2 Configuring Transparent Channel

*Purpose*

The Transparent Channel refers to the transmission channel used for forwarding data between the decoder and the encoder without operating on the data.

**Step 1** Click **Configuration > Decoding Configuration > Transparent Channel** to enter transparent channel settings interface.
Step 2 Select a transparent channel from the list to configure.

Step 3 Click Modify to modify the parameters of the selected transparent channel.

Step 4 Select the **Local Serial Port** and the **Remote Serial Port** to RS-485 or RS-232.

**Local Serial Port**: The serial port used as the transparent channel by the decoder.

**Remote Serial Port**: The serial port used as the transparent channel by the encoding device.

You can click **Delete** to delete the selected channel.

### 5.3 Configuring Synchronous Output Settings

*Purpose*
All video outputs of the device can be configured to be synchronous.

Step 1 Click **Configuration > Decoding Configuration > Synchronous Output Settings** to enter the Synchronous Output Settings interface.

![Figure 5-4 Synchronous Output Settings](image)

Step 2 Click the **Enable Sync Out** button to enable the synchronization of all outputs. The following message box pops up.

![Figure 5-5 Enable Synchronous Output](image)

Step 3 Click **OK** to confirm the settings.

### 5.4 Configuring Personalized Settings

**Purpose**

You can set the stopped decoding image and failed streaming image for the personalized configuration.

Step 1 Click **Configuration > Decoding Configuration > Personalized Configuration** to enter the personalized configuration interface.

![Figure 5-6 Personalized Configuration](image)

Step 2 Select **Blank Screen** or **Last Frame** when decoding ends. If you select **Blank Screen**, the screen will change blank when the decoding ends. If you select **Last Frame**, the screen will show the last frame when the decoding ends.
Step 3 Select No Network Signal or Last Frame when streaming fails. If you select No Network Signal, there shows no network signal when streaming fails. If you select Last Frame, the screen will show the last frame when streaming fails.

Step 4 Click Save to save the settings.
Chapter 6 Decoding Operation

6.1 Configuring Encoding Devices

6.1.1 Adding an Encoding Device

*Purpose*

You can add an encoding device via IP address or URL.

- **Adding an Encoding Device via IP Address**

Step 1  Click IP to add encoding devices.

![Figure 6-1 Encoding Device List](image)

Step 2  Input **Device Name**, **IP Address**, **Port**, **User Name**, **Password** and **Channel Number** and select the **Transmission Protocol**, **Area Name**, and **Device Manufacturer**. Check the checkbox of **Get Stream by Stream Media** to lower the network load of the device.
Step 3 (Optional) You can also click + to add a new area and click □ to save the area.

Step 4 Click Next to select the channel. The channel(s) displayed here depend(s) on the Channel Number you input on the previous page.

Step 5 Click OK to save the settings and add the device.
● Adding an Encoding Device via URL

Step 1 Click **URL** to add encoding devices.

![Encoding Device List](image)

**Figure 6-4 Encoding Device List**

Step 2 Input the **Device Name** and **URL**. Select the **Area Name** from the dropdown list or click + to add a new area.

![Add Device via URL](image)

**Figure 6-5 Add Device via URL**

Step 3 Click **OK** to save the settings.

### 6.1.2 Modifying an Encoding Device

Step 1 Select one area or one encoding device, and click **Modify** to modify corresponding parameters.
Step 2 Click **OK** to save the new settings.

### 6.1.3 Deleting an Encoding Device

Step 1 Select one area or one encoding device and click **Delete** to pop up the note interface below.

![Figure 6-8 Deleting Note](image)
Step 2 Click OK to delete it.

6.2 Configuring Video Wall

**Purpose**

To realize the display of the decoded video on the video wall, you must set the video wall configuration first so as to link the video output with video wall.

Step 1 Click Video Wall Configuration to enter the corresponding interface.

![Figure 6-9 Video Wall Configuration](image)

Step 2 You can use the default video wall layout or click ![ ] to add a new layout. Input the number of screens in row and column and up to 16 × 20 split screens are available.

![Figure 6-10 Screen Layout Configuration](image)

Step 3 Click OK to finish the adding of the video wall information.

Step 4 Drag the output channels from the left-side list to the display screen.

Step 5 Move the cursor to the window, and the icon ![ ] automatically appears in the upper-right corner of the window. Click ![ ] to close the window.
6.3 Configuring Decoding Output

**Purpose**

In the output list, there are two kinds of video output signals, respectively BNC and HDMI. You can configure the resolution and output mode.

### 6.3.1 Configuring BNC Output

**Step 1** Click *Video Wall Configuration* to enter the corresponding interface. Right click one of the BNC signal sources.

![BNC Decoding Output](image)

**Step 2** Right click one of BNC signal sources and select *Resolution Configuration* to pop up the interface as below.

![Resolution Configuration](image)

**Step 3** Select the resolution from the *LCD Resolution* drop-down list. PAL and NTSC are selectable.

**Step 4** Check the checkbox of *Batch Configuration* to set the same configuration for other outputs with same signal source.
Step 5 Click **OK** to save the settings.

### 6.3.2 Configuring HDMI Output

Step 1 Right click one of the HDMI signal sources.

Step 2 Click **Resolution Configuration** to enter the interface below.

Step 3 Select the **Output Mode** and set the corresponding parameters. You can select LCD and LED.

- **LCD**
  1. Select the **Output Mode** to LCD.
  1. Select the resolution from the **LCD Resolution** drop-down list.
LED

1. Select the Output Mode to LED.
2. Input the LED Width and LED Height in the corresponding text fields.

NOTE

- The value of LED width and height cannot exceed the output resolution you select.
- The supported min. value of LED width × height of HDMI output is 288 × 288 and the max. value is 1920 × 1080.

Step 4 Check the checkbox of Batch Configuration to set the same configuration for other outputs with same signal source.
Step 5 Click OK to save the settings.

Step 6 Right click one of the HDMI signal sources and click **Output Mode Configuration** to pop up the interface below.

![Output Mode Configuration](image)

Step 7 Select the output mode to HDMI or DVI.

Step 8 Check the checkbox of **Batch Configuration** to set the same configuration for other HDMI outputs.

Step 9 Click OK to save the settings.

### 6.4 Decoding Video on Video Wall

**Purpose**

You can decode the video of the encoding devices on the video wall by dragging the channel directly or opening window via coordinate.

#### 6.4.1 Interface Description

Click **Video Wall** to enter the video wall interface.
Refer to the following figure for the video wall description.

![Figure 6-21 Video Wall Interface](image)

### Table 6-1 Description of Video Wall

<table>
<thead>
<tr>
<th>No.</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td><strong>Encoding Device List</strong>: The encoding devices added in the Web</td>
</tr>
<tr>
<td>2</td>
<td><strong>Scene</strong>: The Web supports up to 8 scenes by default, capable of independent scene configuration and fast switching.</td>
</tr>
<tr>
<td>3</td>
<td><strong>Video Wall</strong>: Video wall operation interface</td>
</tr>
</tbody>
</table>
| 4   | **Shortcut Toolbar**:  
  - Select decoding screen layout.  
  - Save the scene  
  - Delete all windows  
  - Refresh all windows  
  - If two decoding windows overlap with each other, click the icon to switch the upper window to the bottom. |

### 6.4.2 Dragging Channels to the Video Wall

Step 1 Drag the channel from the left side list to realize the decoding in the selected window.
You can also drag an area file to the video wall to decode the added encoding devices in the area file on the video wall.

**NOTE**

- You cannot drag an area file to the video wall across the LCD and LED outputs.
- If there are more than 3 encoding devices in an area, when you drag the area file to the video wall, the note pops up to remind you that no more window can be opened or the total area of layers in single-screen has reached the limit. Only the first 3 encoding devices in the area file can be decoded on the video wall.

![Figure 6-22 Decode the Video on the Wall](image)

Step 2 Select one decoding window and click to set the decoding screen layout. 1/2/4/6/8/9/12/16/25/36 window division modes are available.

![Figure 6-23 Window Division](image)

### 6.4.3 Opening Window via Coordinate

Step 1 Select one encoding device and right-click it to pop up the interface below.
Step 2 Click **Open Window via Coordinate**.

Step 3 Select the **Window Opening Mode**. LCD and LED are selectable.

- **Opening Window via Coordinate for LCD Output**
  1) Select the **Window Opening Mode** as **LCD**.
  2) Enter the **Left Margin**, **Right Margin**, **Width** and **Height** in the corresponding text fields.
  3) Click **OK** to save the settings.

  4) The window will be opened in the LCD area.

- **Opening Window via Coordinate for LED Output**
1) Select the **Window Opening Mode** as **LED**.

2) Select the **LED** area.

   The area number depends on the HDMI decoding output configuration. For the adjacent HDMI outputs, if the resolution is configured to be LED, and the LED width or height is same, they can be seen as one area. You can refer to *Chapter 6.3.2 Configuring HDMI Output*.

3) Enter the **Left Margin**, **Right Margin**, **Width** and **Height** in the corresponding text fields.

4) Click **OK** to save the settings.

5) The window will be opened in the LED area.

6.4.4 Managing Decoding

Right-click the selected window and the Decoding Management interface pops up.
Stop Decoding
Click the button to stop decoding.

Decoding Status
1. Click the button to enter the decoding status interface.
2. View the decoding status.

3. Click More to check the decoding information of each channel.

Turn on Audio
1. Click the button to enter the interface below.
2. Select from the dropdown list to enable the audio in the corresponding window.
3. Click OK to save the settings.

- **Decoding Delay**
  1. Click the button to enter the decoding delay interface.
  2. Select the type of decoding delay. The default mode is the same with medium real time and fluency.

   ![Decoding Delay](image)

   Figure 6-33 Decoding Delay

   3. Click OK to save the settings.

- **Enable Smart Information**
  1. Click the button to enable smart information.
  2. (Optional) Click **Disable Smart Information** to disable the function.

   ![NOTE](image)

   For the normal IP camera, the smart information refers to the VCA information. For the thermal network camera, the smart information refers to the VCA and the temperature, dynamic fire source detection and ship detection information.

### 6.4.5 Switching Encoding Channel

**Purpose**

You can switch the encoding channel to display on the selected decoding window.

Step 1 Select a decoding window and select an encoding channel from the left side list.

Step 2 Click **Switch Channel** from the right-click menu to switch the selected channel to the decoding window.
6.4.6 Configuring Auto-Switch of Cameras

**Purpose**

You can enable auto-switch of the added cameras in one area.

Step 1 Select a camera area and click **Start Auto-Switch** from the right-click menu.

Step 2 On the Start Auto-Switch interface, input the **Interval** for auto-switch.

Step 3 Click **OK** to save the settings.

6.4.7 Roaming Window

Step 1 Drag one camera from the left side list to the video wall layout to enable decoding in the corresponding window automatically.

Step 2 Drag the decoding window randomly to realize the window roaming on the video wall.
Step 3 Select one of the roaming windows, and click to realize window division in the selected roaming window with 1/2/4/6/8/9/12/16/25/36 available.

Step 4 (Optional) Generally the selected window is at top by default. Click to place the selected window at bottom.

**NOTE**

- Roaming and fluent video cannot be realized in the window with the signal output via BNC interfaces.
- The roaming window cannot cross the output window of different resolution. For example, you cannot move the roaming window across the LCD and LED window.

### 6.4.8 Zooming in/out Roaming Windows

**Purpose**

You can double click the roaming window to zoom in or out.

- **For one roaming window:**

Step 1 Double click the roaming window to zoom in. Then the window will occupy the area with the same output.

![Figure 6-38 Zoom in](image)

Step 2 Double click the window again to zoom out. Then the window will restore to the original size.
For divided roaming sub-window:

Step 1 Double click the divided roaming sub-window to zoom in. Then the sub-window will occupy the whole window before being divided.

Step 2 Double click the divided roaming sub-window again to zoom out. Then the sub-window will restore to the original size.
6.4.9 Configuring Scene

**Purpose**

Different video wall layouts can be saved as different scenes and up to 8 scenes can be added. You can easily view the required live videos on the video wall by calling the scene.

Step 1 In the Video Wall interface drag the channel from the left side list to realize the decoding in the selected window.

Step 2 Click **Save** to save the scene directly or click **Save as** to pop up the following dialog box.
Step 3 Input the **Name** and click **OK** to save the scene.

Step 4 Select one of the scenes you have configured. Click to call the scene.

Step 5 (Optional) You can also click to rename the scene, or click to delete the scene.
Chapter 7 User Management

Purpose
You can add, modify, delete, and set the permissions of the user accounts on the User Management interface.

Step 1 Click Configuration > System > User Management to enter the user management interface.

Step 2 You can add, modify or delete the user account, as well as configure operating permissions for each user account.

Figure 7-1 Configure User Account

Figure 7-2 Add User Account and Set Permissions
NOTE

- Up to 32 user accounts can be added including the admin.
- For the admin user, only the password can be modified.
- You must input the admin password if you want to modify the user account except the admin.

WARNING

STRONG PASSWORD RECOMMENDED—We highly recommend you create a strong password of your own choosing (Using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers, and special characters.) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.
Chapter 8 System Configuration

8.1 Checking Device Information

Purpose
You can check the information of the device in the device information interface, such as the Device Type, Device Serial No., Firmware Version, Decoding Version, Web Version, Plugin Version etc.

Click Configuration > System > System Settings > Basic Information to view Device Type, Device Serial No., Firmware Version, DSP Version, etc.

NOTE
The description about the decoder configuration and operation by web browser below is based on the firmware, decoding, web and plugin version shown in the following figure.

![Figure 8-1 Checking Device Information](image)

8.2 Configuring Time Settings

Purpose
You can set the time for the decoder in the Time Settings interface.

Step 1 Click Configuration > System Settings > Time Settings to enter the following interface:
Step 2 Configure the time synchronization by NTP server or manually.

**Configuring Time Synchronization by NTP Server**

A Network Time Protocol (NTP) Server can be configured on your device to ensure the accuracy of system date/time.

If the device is connected to a Dynamic Host Configuration Protocol (DHCP) network that has time server properties configured, the camera will synchronize automatically with the time server.

Enable the **NTP** function by selecting the radio button, and configure the following settings:

- **NTP Server**: IP address of NTP server.
- **NTP Port**: Port of NTP server.

**NOTE**

If the device is connected to a public network, you should use a NTP server that has a time synchronization function, such as the server at the National Time Center (IP Address: 210.72.145.44). If the device is set up in a more customized network, NTP software can be used to establish a NTP server used for time synchronization.

**Configuring Time Synchronization Manually**
Enable the **Manual Time Sync.** function by selecting the radio button and then click icon to set the system time from the pop-up calendar.

![Manual Time Sync.](image)

**Figure 8-4 Configure Time Manually**

Step 3 Select the time zone that is closest to the device’s location from the drop-down list.

Step 4 Click **Save** to save the settings.

### 8.3 Configuring RS-232 Serial Port

Step 1 Click **Configuration > System Settings > RS-232** to enter the following interface:

![RS-232 Settings](image)

**Figure 8-5 Configure RS-232 Settings**

Step 2 Configure the RS-232 parameters, including the baud rate, data bit, stop bit and parity type.

Step 3 Select the Operating Mode of RS-232 as **Console** or **Transparent Channel**.

- **Console**: Use the RS-232 serial port for debugging the decoder.
- **Transparent Channel**: Use the RS-232 serial port as the transparent channel.

Step 4 Click **Save** to save the settings.
8.4 Configure RS-485 Serial Port

Step 1 Click **Configuration > System Settings > RS-485** to enter the following interface.

![RS-485 Configuration Interface](image)

**Figure 8-6 Configure RS-485 Settings**

Step 2 Configure the RS-485 parameters, including the baud rate, data bit, stop bit and parity type.

Step 3 Click **Save** to save the settings.
Chapter 9 System Maintenance

Purpose
You can click Configuration > System > Maintenance to perform configuration files import/export, reboot, upgrade, and default operations.

9.1 Importing Configuration Files

Purpose
The configuration files of the device can be imported from the local device, which maintains convenient parameters configuration.

Step 1 Enter the parameters import interface.

![Figure 9-1 Import Configuration File](image)

Step 2 Click Browse to select the file from the local directory and then click the Import button to import a configuration file. Click Device Parameters to export parameters.

9.2 Exporting Configuration Files

Purpose
The configuration files of the device can be exported to the local device, which maintains convenient parameters configuration.

Step 1 Enter the parameters export interface.

![Figure 9-2 Export Configuration File](image)

Step 2 Click Device Parameters to export parameters.
9.3 Upgrading the Device

Step 1 Enter the Upgrade interface.

Step 2 Click **Browse** to search the upgrading files.

Step 3 Click **Upgrade** to upgrade it.

![Upgrade interface](image)

**Figure 9-3 Upgrade the Device**

**NOTE**

- When logging in to the device for the first time, install the plug-in according to the prompt on the screen.
- The device will restart after completing the upgrade.

9.4 Restoring the Default Settings

Step 1 Enter the Default Settings interface.

Step 2 Click **Default** to restore the completed factory settings of the decoder.

Or click **Restore** to restore a part of the factory settings of the decoder.

![Default Settings interface](image)

**Figure 9-4 Restore Default Settings**

9.5 Rebooting the Device

Step 1 Enter the Reboot Device interface.

Step 2 Click **Reboot** to reboot the device.

![Reboot interface](image)

**Figure 9-5 Reboot the Device**
Chapter 10 Decoder Configuration and Operation by Client Software

Run the disk of iVMS-4200 Video Wall Client Software, and double click the icon to install it in your PC. In this chapter, the basic procedure of operating the decoder by the software is described and the description is based on the video wall client software version shown in the following figure.

Figure 10-1 Video Wall Client Software Information

10.1 Interface Description

The following figure shows the main interface after accessing to the software.

Figure 10-2 Main Interface

Refer to the following table for the description of the decoding toolbar on the bottom of the main interface.
### 10.2 Adding an Encoding/Decoding Device

Step 1 Click **Device Management** tab to enter the Device Management interface.

---

#### Table 10-1 Decoding Toolbar

</tr>
</tbody>
</table>

**NOTE**

The software is capable of many functions for controlling and managing many devices. In this manual, only the operation related to the decoder is introduced.
Step 2 Click **Add Device** and you can add device manually by means of IP address/domain and IP segment.

Step 3 You can add device by detecting the online devices. The active online decoding devices in the same local subnet with the software are displayed on the list. Select the decoder and click **Add to Client** to add the decoder.

The successfully added encoding/decoding device can be viewed in the list.
10.3 Configuring Video Wall

10.3.1 Adding a Video Wall

Step 1 Click Video Wall tab to enter the Video Wall interface.

Step 2 You can use the default video wall layout or click and select Add Video Wall to enter the Add Video Wall interface.

**NOTE**

You can modify the default video wall, but not allowed to delete it.
Step 3 Input the Video Wall Name, and the number of windows in row and column text fields.

Step 4 Click Add to add the video wall.

**NOTE**

- Up to 5 video walls can be added to the client software.
- The range of the row number is between 1 and 16, and column number between 1 and 20.

Step 5 Drag the output channels from the left side list to link the decoding output to the video wall.

Step 6 (Optional) You can select a linked display window and click Cancel to cancel the linkage, or click Cancel All to cancel all the linked windows.
10.3.2 Modifying a Video Wall

Step 1 Click **Modify Video Wall** to enter the Modify Video Wall interface.
Step 2 Edit the layout, name and decoding outputs of the current video wall.

![Modify Video Wall](image)

Figure 10-10 Modify Video Wall

10.3.3 Deleting a Video Wall

Step 1 Select **Delete Video Wall** and the information dialog box pops up.
Step 2 Click **OK** to delete the selected video wall.

![Delete Video Wall](image)

Figure 10-11 Delete Video Wall

10.3.4 Configuring Virtual Screen

*Purpose:*

Video wall layout is restricted by the physical screen and in practice, one physical screen usually displays more than one signal source. Virtual screen layout allows one physical screen to display multiple signal sources and get rid of the restriction of physical screen.

Step 1 On the Video Wall interface, click ![icon] and select **Modify Video Wall** to enter the Modify Video Wall interface.
Step 2 Select the output area for adding virtual screen.

Step 3 Click Virtual Screen Config to expand the Virtual Screen Configuration menu.

Step 4 Select the window(s) you want to add virtual screen.

You cannot add virtual screen across the LCD and LED areas.

Step 5 Click Add Virtual Screen to enter Configure Virtual Screen interface.

1. Select a virtual screen mode from and input the row and column number.
NOTE

For the 4:3 mode, the row number ranges from 1 to 16 and column number ranges from 1 to 20. For modes such as 16:9, the row number ranges from 2 to 16 and the column number ranges from 2 to 20. For modes such as 4:3, the row number ranges from 2 to 16 and the column number ranges from 3 to 20.

Figure 10-14 Configure Virtual Screen

2. Input the Left Crop Pixel, Top Crop Pixel, Right Crop Pixel and Bottom Crop Pixel in the corresponding text fields.

3. Click OK to save the settings and the dotted line in grey constitutes the virtual screen division.

Figure 10-15 Added Virtual Screen

Step 6 (Optional) Select the configured virtual screen area and click Delete Virtual Screen to delete it.

Step 7 On the Video Wall interface, drag a signal source to the window, and you can view the live view in the virtual video wall layout.
10.4 Configuring Decoding Parameters

**Purpose**

You can configure what the screen show when decoding ends and streaming fails, enable auto-switch of sub-stream, and set the LED window display mode on the Add/Modify Video Wall interface.

Step 1 On the Add/Modify Video Wall interface, select the added decoder and click to enter the General Parameters Configuration of Video Wall interface.

![General Parameters Configuration of Video Wall](image)

Step 2 Select **Blank Screen** or **Last Frame** when decoding ends. If you select **Blank Screen**, the screen will change blank when the decoding ends. If you select **Last Frame**, the screen will show the last frame when the decoding ends.

Step 3 Select the **LED Window Display Mode**. Normal and Tiled are selectable.

Step 4 Click **OK** to save the settings.

10.5 Configuring Decoding Output

**Purpose**
You can set the output type and resolution of BNC and HDMI decoding outputs on the Add/Modify Video Wall interface.

### 10.5.1 Configuring BNC Output

**Step 1** On the Add/Modify Video Wall interface, select a BNC decoding output and click ![enter](image) to enter the Edit Output interface.

**Step 2** Select the **Output Type** and set the corresponding parameters. Only LCD output type can be configured.

**Step 3** Select the **Video Standard**. PAL and NTSC are selectable.

**Step 4** Check the checkbox of **Batch Configuration** to set the same configuration for other outputs with same signal source.

**Step 5** Click **OK** to save the settings.

### 10.5.2 Configuring HDMI Output

**Step 1** On the Add/Modify Video Wall interface, select a HDMI decoding output and click ![enter](image) to enter the Edit Output interface.
Step 2 Select the **Output Type** and set the corresponding parameters. You can select LCD and LED.

- **LCD**
  1. Select the **Output Type** to LCD.
  2. Select the **Output Resolution** from the dropdown list.

- **LED**
  1. Select the **Output Type** to LED.
  2. Select the **Output Resolution** from the dropdown list.
  3. Input the **Width × Height** in the corresponding text fields.

**NOTE**

- The value of LED width and height cannot exceed the output resolution you select.
- The supported min. value of LED width × height of HDMI output is 288 × 288 and the max. value is 1920 × 1080.

Step 3 Check the checkbox of **Batch Configuration** to set the same configuration for other outputs with same signal source.
Step 4 Click **OK** to save the settings.

You can also modify the LED resolution by selecting the LED area and click **LED Resolution Config** to input the **LED Resolution** in the text fields.

10.6 Operating Decoding

*Purpose*

After the settings of the encoding device, decoding device and video wall, the video stream from the encoding devices can be decoded and displayed on the video wall.

**NOTE**

After enabling decoding and displaying, the video from the encoding devices can be displayed on the video wall. And the real-time live view is shown on the physical video wall.

10.6.1 Dragging Channels to the Video Wall

Step 1 Enter the Video Wall interface.
Step 2 Drag the camera from the left side camera list to the display window of video wall. The video stream from the camera will be decoded and displayed on the video wall.

You can also select a decoding window and then double click a camera to decode and display the video. You can also hold the Ctrl or Shift key to select multiple cameras and then drag them to the video wall.

NOTE

You can click on the lower part of the interface to stop decoding of all the windows.

10.6.2 Opening Window for Non-LED Screen

Purpose

On the non-LED screen you are allowed to open the window via coordinate.

Step 1 Enter the Video Wall interface, select the non-LED screen and click the button to open the window via coordinate.

Figure 10-24 Video Wall Interface

Figure 10-25 Open Window via Coordinate (1)
Step 2 Select the **Device Name** from the drop down list, and input the **X-Coordinate**, **Y-Coordinate**, **Width** and **Height**.

Step 3 Click **OK** to save the settings and the opened window will be displayed on the video wall.

![NOTE]

- You cannot open the window via coordinate across both the non-LED and LED screens.
- The X-coordinate and Y-coordinate are relative output channel coordinates.

### 10.6.3 Opening Window for LED Screen

**Purpose**

On the LED screen you are allowed to open the window via coordinate.

Step 1 Enter the **Video Wall** interface, select the LED screen and click the button to open the window via coordinate.

![Figure 10-26 Open the Window via Coordinate (2)]

Step 2 Select the **Device Name** from the drop down list, and input the **X-Coordinate**, **Y-Coordinate**, **Width** and **Height**.

Step 3 Click **OK** to save the settings and the opened window will be displayed on the video wall.

![NOTE]

- You cannot open the window via coordinate across both the non-LED and LED screens.
- You cannot edit the LED X-Coordinate and LED Y-Coordinate.
- The X-coordinate and Y-coordinate are relative output channel coordinates.

### 10.6.4 Managing Decoding

Step 1 Right-click on a playing window to activate the decoding management menu as shown below.

![NOTE]

The menu differs depending on the devices.
Step 2 Configure the following parameters.

- **Start/Stop Decoding**: Start/stop the decoding.
- **Start/Stop Live View**: Start/stop the live view of the decoded video. The smart information can be displayed in live view.
- **Start/Pause Auto-Switch Decoding**: Start/pause auto-switch decoding. This function is only supported by decoder.
- **Start/Stop VCA Decoding**: Start/stop VCA decoding.
- **Enable Audio**: Turn on/off the audio of the decoding video.
- **Decoding Status**: View the status of the decoding channel, like decoding status and stream type.
- **Stick at Bottom**: Generally the selected window is at top by default. Click **Stick at Bottom** to place the selected window at bottom.
- **Lock/Unlock**: Click **Lock** to lock the window. The locked decoding window is unable to do any operation.
- **Set Alarm Window**: Display the video triggered by event or alarm input on video wall.
- **Screen Control**: Enter the screen control when the RSC server is added. Please refer to Chapter 7.7 for details.

### 10.6.5 Configuring Auto-Switch Decoding

**Purpose**

Auto-switch decoding refers to you can configure multiple video streams in a video output and the dwell time in switching video streams.

Step 1 Drag a camera group to the display window of the video wall.

Step 2 Click to set the dwell time for the auto-switch decoding and click to start auto-switch decoding. You can view the auto-switch decoding on the physical video wall. You can click to stop auto-switch decoding.
10.6.6 PTZ Control

**NOTE**

This section is only applicable to the decoded cameras supporting PTZ control.

**Step 1** Click **PTZ Control** to expand the PTZ control panel.

![PTZ Control Panel](image)

**Step 2** Click the directional and functional buttons to set the preset.

10.6.7 Playback

**Purpose**

The video file is supported to be played back on the video wall.

**NOTE**

Playback function is only supported by decoder.

**Step 1** Drag the camera on the left-side list to the display window of video wall, or you can open a window if supported.
Step 2 Click **Window** at the bottom to unfold more configuration and operation toolbar.

Step 3 Click **Start Playback** to start searching the video files of the camera.

Step 4 If the record file is of current day, the video file can be played back automatically. If not, you can click ![date icon](image) to show the date and click **More Search Conditions** to specify more conditions, and click **Search** to find the video file.

The following icons are available for controlling the playback.

<table>
<thead>
<tr>
<th>Icon</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="#" alt="Pause/Start" /></td>
<td>Pause/Start the playback</td>
</tr>
<tr>
<td><img src="#" alt="Delete" /></td>
<td>Delete View</td>
</tr>
<tr>
<td><img src="#" alt="Slow" /></td>
<td>Slow Forward</td>
</tr>
<tr>
<td><img src="#" alt="Fast" /></td>
<td>Fast Forward</td>
</tr>
<tr>
<td><img src="#" alt="Clip" /></td>
<td>Start/Stop Clipping</td>
</tr>
<tr>
<td><img src="#" alt="Capture" /></td>
<td>Capture</td>
</tr>
</tbody>
</table>

### 10.6.8 Configuring Scene

**Step 1** Click **Scene** to expand the scene interface.

**Step 2** You can click **+** to add a new scene, click **edit** to edit the name for the scene, click **x** to delete the scene and click **save** to save the scene.

![NOTE](#)

Up to 8 scenes can be added.

![Scene List](#)

**Figure 10-33 Scene List**

### 10.6.9 Configuring Window

- **Configuring Window Division Mode**

*Purpose*

You can set the window division mode of the decoding window.

**Step 1** Drag a camera from the left-side list to the display window of the video wall, or you can open a window.

**Step 2** Click **Window** to expand the menu.
Step 3 Click to select the window division mode. 1/2/4/6/8/9/12/16/25/36 modes are selectable.

![Image of Video Wall Configuration](image)

**Figure 10-34 Two-Window Division Mode**

- **Zooming in/out Roaming Windows**
  You can double click the roaming window to zoom in or out. Refer to *Chapter 6.4.8 Zooming in/out Roaming Windows* for reference.

- **Configuring Window Parameters**
  **Purpose**
  You can set the window as the alarm window to display the video triggered by event or alarm input on the video wall. You can also set the decoding delay and image parameters.

Step 4 Drag the camera from the left-side list to the display window of the video wall, or you can open a window if supported.

Step 5 Click **Window Configuration** to pop up the configuration dialog box.
Configure the parameters as needed. The window status shows the current status of the selected window.

- **Alarm Window**: Display the video triggered by the event or alarm input on the selected window of the video wall.
- **Decoding Delay**: Set the delay status of the decoding according to the actual needs.

![Window Configuration](image)

**NOTE**

Functions like Fluent Video, Smart Decoding, 3D DNR, Defog, and Low Illumination are not supported by DS-6900UDI.

**10.7 Decoding Thermal Network Camera**

**Purpose**

The thermal network camera can be connected to the decoder and you can realize live view and playback, and decode the video including the temperature or fire point information on the video wall.

**10.7.1 Configuring the Thermal Network Camera Parameters**

**Purpose**

You can configure the corresponding parameters of thermal network camera via the Web browser first before decoding it on the video wall.

**Configuring Temperature Measurement**

Step 1 Configure the VCA resource type.

1. Log in to the camera via the Web browser.
2. Click Configuration > Advanced Configuration > System > VCA Resource Type to enter the VCA Resource Type configuration interface.

3. Select Temperature Measurement and Behavior Analysis as the VCA Resource Type.

4. Click Save to save the settings.

Step 2 Configure temperature measurement.

1. Click Configuration > Advanced Configuration > Temperature Measurement > Temperature Measurement Configuration to enter the Temperature Measurement configuration interface.

2. Check the checkboxes of the interface to set the temperature measurement configurations.
   - **Enable Temperature Measurement**: Check the checkbox to enable temperature measurement function.
   - **Display Temperature Info. on Stream**: Check the checkbox to display temperature information in live view.
   - **Add Original Data on Capture**: Check the checkbox to add original data on capture.
   - **Add Original Data on Stream**: Check the checkbox to add original data on stream.

3. Select the **Data Refresh Interval** from 1s to 5s.

4. Select the **Unit** to display temperature with Degree Celsius (°C)/Degree Fahrenheit (°F)/Degree Kelvin (K).

5. Configure the **Temperature Range**.

6. Click Save to save the settings.

Step 3 Configure the temperature measurement and alarm.

1. Click Configuration > Advanced Configuration > Temperature Measurement > Temperature Measurement and Alarm to enter the Temperature Measurement and Alarm configuration interface.
2. Set the alarm rule: Select a temperature measurement rule from the rule list and configure the parameters.

- **Name:** You can customize the rule name.
- **Type:** Select point, line, or frame as rule type.
- **Emissivity:** Set the emissivity of your target. The emissivity of each object is different.
- **Distance (m):** The straight-line distance between the target and the device.
- **Reflective Temperature:** If there is any target with high emissivity in the scene, check the checkbox and set the reflective temperature to correct the temperature. If no such target exists, uncheck the checkbox.

3. Click in the list to show the alarm rule interface.

- **Alarm Rule:** The alarm rule varies according to different types. The rule is to compare the temperature information of two selected regions. For targets set by frame, the rules include: **Max. Temperature is Higher than,** **Max. Temperature is Lower than,** **Min. Temperature is Higher than,** **Min. Temperature is Lower than,** **Average Temperature is Higher than,** **Average Temperature is Lower than,** **Temperature Difference is Higher than,** and **Temperature Difference is Lower than.** For targets set by line, the rules include **Max. Temperature,** **Min. Temperature,** and **Average Temperature.** For targets set by point, the rules are distinguished by **Average Temperature.**

- **Pre-Alarm Temperature and Alarm Temperature:** Set the pre-alarm temperature and alarm temperature. The device sends pre-alarm when its rule temperature exceeds pre-alarm temperature and sends alarm when its rule temperature exceeds alarm temperature.
- **Tolerance Temperature:** Set the tolerance temperature and the device judges whether the triggered alarm stops until the device temperature/temperature difference is lower than rule temperature by tolerance temperature. For example, set tolerance temperature as 3°C, set alarm temperature as 55°C, and set pre-alarm temperature as 50°C. The device sends pre-alarm when its temperature reaches 50°C and it alarams when its temperature reaches 55°C and only when the device temperature is lower than 52°C will the alarm be cancelled.

4. Draw the Target Region. Select the rule and draw the corresponding frame/line/point. Click 📑 to draw the point. Click 🔄 to draw the line. Click 🔄 to draw the frame.

![Figure 10-38 Draw Point](image)

![Figure 10-39 Draw Line](image)

![Figure 10-40 Draw Frame](image)
5. Set Temperature Difference Alarm. Click **Temperature Difference Alarm** to enter the temperature difference alarm interface, up to four temperature difference alarms can be set.

**NOTE**

Temperature Difference Alarm is only applicable to the targets set by frame.

6. Set Alarm Linkage. Click **Alarm Linkage** to enter the alarm linkage interface and set the linkage methods.

7. Click **Save** to save the settings.

**Step 4** Configure the local parameters to display the temperature information on the live view interface.

1. Click **Configuration > Local Configuration** to enter the Local Configuration interface.

![Local Configuration](image)

2. In the Live View Parameters section, select the **Enable** radio button of **Display Temperature Info. on Stream** to display the temperature information on the live view interface.

3. Click **Save** to save the settings and then you can view the position of the configured point, line and frame, the ID and temperature information on the live view interface.
Configuring Dynamic Fire Source Detection

Step 1 Configure the VCA resource type.

1. Log in to the camera via the Web browser.
2. Click **Configuration > Advanced Configuration > System > VCA Resource Type** to enter the VCA Resource Type configuration interface.
3. Select **Dynamic Fire Source Detection** as the VCA Resource Type.
4. Click **Save** to save the settings and the device will reboot to take the settings into effect.

**NOTE**

For the VCA resource type, only one type can be configured. For example, if you select **Temperature Measurement and Behavior Analysis** as the VCA resource type, you cannot set **Dynamic Fire Source Detection**.

Step 2 Configure dynamic fire source detection parameters.

1. Click **Configuration > Advanced Configuration > Smart Event > Dynamic Fire Source Detection** to enter the Dynamic Fire Source Detection configuration interface.

![Dynamic Fire Source Detection Configuration](image)
2. Check the checkbox of **Enable Dynamic Fire Source Detection** to enable the function.

3. (Optional) Check the checkbox of **Display Fire Source Frame on Stream** to display a red frame around the fire source on stream when fire occurs.

4. You can slide the cursor to adjust the **Sensitivity** degree of dynamic fire source detection from 1 to 10. The bigger the number is, the more sensitive the detecting would be.

5. Check the checkbox to select the **Linkage Method** taken for the alarm input.

6. Click **Save** to save the settings.

Step 3 Configure the local parameters to display fire point distance, display highest temperature, locate highest temperature point or frame fire point on the live view interface.

1. Click **Configuration > Local Configuration** to enter the Local Configuration interface.

![Figure 10-44 Local Configuration](image)

2. In the Live View Parameters section, check the checkbox after **Fire Point** to enable the functions required. **Display Fire Point Distance, Display Highest Temperature, Locate Highest Temperature Point and Frame Fire Point** are selectable.

3. Click **Save** to save the settings and then you can view the fire point distance, highest temperature, highest temperature point or fire point frame in the live view if fire point is detected.

**Configuring Ship Detection**

**Step 1** Enter **Configuration > Advanced Configuration > System > VCA Resource Type** to select **Ship Detection** as the VCA Resource Type.

**Step 2** Click **Configuration > Advanced Configuration > Smart Event > Ship Detection** to enter the Ship Detection interface.
Step 3 Check the checkbox of **Enable Ship Detection** to enable the function.

Step 4 Check the checkbox of **Display Detection Frame on Video** to display the frame and alarm line on stream.

Step 5 Input the device height in the textbox as the height of device above the water level.

Step 6 Draw the ship detection area and the alarm lines.

1. Click **Draw Area** button. Click the mouse on the live view image to draw a ship detection area and right-click to finish drawing. The alarm will be uploaded when ship is detected in this area.

2. Click **Draw Alarm Line** button. Click the mouse on the live view image to draw an alarm line and right-click to finish drawing. The device alarms and counts the ship number when ships are detected in the area and the ship information will be displayed on the right.

**NOTE**

Make sure the alarm line is longer than the width of ship detection area.

3. Click **Recount** to start counting the ships detected in the area afterwards.

Step 7 Check the checkbox to select the linkage method taken for the alarm input.

Step 8 Click **Save** to save the settings.

**Configuring VCA**

Step 1 Configure the live view parameters to enable rules.

1. Click **Configuration > Local Configuration** to enter the Local Configuration interface.

![Figure 10-45 Local Configuration](image)
2. On the **Live View Parameters** section, select the **Enable** radio button after **Rules** to display the colored marks when the motion detection, face detection, or intrusion detection is triggered. E.g., enabled as the rules are, and the face detection is enabled as well, when a face is detected, it will be marked with a green rectangle on the live view.

**Step 2: Configure the VCA information.**

1. Click **Configuration > VCA Configuration > VCA Info.** to enter the VCA Information interface.

![VCA Information](image)

2. On the **Display Information** section, check the checkboxes to enable corresponding displays.
   - **Display Target info. on Alarm Picture**: There will be a frame on the target on the uploaded alarm picture if the checkbox is checked.
   - **Display Rule info. on Alarm Picture**: The captured target and the configured area will be framed on the alarm picture.
   - **Display VCA info. on Stream**: The green frames will be displayed on the target if in a live view or playback.

**Step 3: Configure the rules for VCA.** Refer to the User Manual of Thermal Network Camera for the specific operations.

### 10.7.2 Decoding Thermal Network Camera on the Video Wall

**Step 1: Add the thermal network camera to the video wall client software.**

**Step 2: On the Video Wall interface, drag the added thermal network camera to the video wall.**

**Step 3: Click** ![to start live view](image) **to start live view and you can view the corresponding information on the live view interface.**
If VCA is enabled for the thermal network camera, the decoder can analyze the VCA behavior, mark the moving target and track it. You can view the VCA information marked in the green frames in the live view. If the rule configured for the thermal network camera is broken, the alarm will be triggered.

If temperature measurement is enabled, you can view the position of the configured point, line and frame, the ID, and temperature information in the live view.

If fire point detection is enabled and there is a fire point detected, you can view the configured fire point distance, highest temperature, highest temperature point and fire point frame in the live view.

If ship detection is enabled and there is a ship detected, you can view the configured frames and alarm line in the live view.

Step 4 (Optional) You can click Window tab on the bottom of the interface and click Start Playback to start playing back the camera. Refer to Chapter 7.5.7 Playback for reference. The temperature measurement, fire source detection, ship detection and VCA information can be played back.

Step 5 (Optional) You can click or click Stop VCA Decoding from the right-click menu to stop VCA decoding of the thermal network camera.

10.8 Controlling Remote Screen

Purpose

Installed with the RSC Server, it allows you to show your PC screen on the video wall. Follow the following procedure to configure the RSC server and get your screen shown on the video wall.
10.8.1 Configuring the RSC Server

Step 1 Install the RSE Server, which enables the PC screen to be displayed on the video wall, and double-click to run it.

![Image of RSC Server interface]

Figure 10-48 Run the RSC Server

Step 2 You can click Status to check the server information, including the IP address, name, port, password of the server, and the connected device number.

Step 3 Click Settings to check the directory of saving the program files, enable or disable the feature of Auto-Run when OS starts, and select the language (Chinese/English).

![Image of RSC Server settings interface]

Figure 10-49 Local Configuration of RSC Server
10.8.2 Controlling Remote Screen via RSC Server

Step 1 Enter the Video Wall interface and click in the Camera list area, or click on Device Management interface to add the RSC server.

![Add RSC Server](image)

**Figure 10-50 Add RSC Server**

Step 2 Enter the parameters to add the RSC server. Please refer to Chapter 7.1 Adding an Encoding /Decoding Device to add the RSC server.

![Camera List](image)

**Figure 10-51 Added RSC Server**

Step 3 The successfully added RSC server is listed in the camera list.

Step 4 On the camera list, drag the RSC server to the video output window.

The default user name is *admin* and the server password is 12345 and we highly recommend you to change the default password to avoid the security problem.
Step 5 Right-click on the window and select **Screen Control** to remotely control the signal source.

![Figure 10-52 Link RSC to Video Wall](image)

**NOTE**

The RSC server supports the screen control for 1-channel video output only.

![Figure 10-53 Right-click Menu](image)

Step 6 You can use the toolbar on the window’s upper right corner to realize the operations for image, video, PPT and remark.
Figure 10-54 Screen Control Interface

- Click to display all the image files in the directory set in the RSC Sever.

Figure 10-55 Screen Control Interface (1)

- Click to display all the video files in the directory set in the RSC Sever.

Figure 10-56 Screen Control Interface (2)

- Click to display all the PPT files in the directory set in the RSC Sever.
10.9 Remote Configuration

**Purpose**

On the Remote Configuration interface, you can configure the parameters of the added device, including the system, network, event, etc.

Step 1 On the Device Management interface, click to select an added device from the list and click **Remote Configuration** to enter Remote Configuration interface.
Step 2 Configure the System parameters, Network parameters and Event parameters on the Remote Configuration interface.

10.9.1 Configuring Port Aggregation

**Purpose**

The Port Aggregation (Ethernet Channel) is port link aggregation technology or port-channel architecture used for the connection between the switches.

Step 1 Click **Remote Configuration > Network > Port Aggregation** to enter the Port Aggregation Settings interface.

Step 2 Select a link number from the list.

Step 3 Check the checkbox to select the network interfaces to form a channel-group link, which can effectively enhance the link transmission bandwidth.

![Figure 10-60 Port Aggregation Settings](image-url)
The port aggregation is not supported by DS-6901UDI.
The switch connected to DS-6900UDI must be configured with the port aggregation as well.
Two adjacent network interfaces cannot be selected to form a link. For example, you can select Network Interface 1 and Network Interface 3, or Network Interface 2 and Network Interface 4.
The network interface 1 corresponds to the GE1 interface, network interface 2 to G1, network interface 3 to GE2, and network interface 3 to G2 on the rear panel.
The G1 and G2 can be used as 2G switch when the network interface 2 and network interface 4 are configured in port aggregation.

10.9.2 Configuring Wi-Fi Settings

Purpose
The Wi-Fi can be used as the supplement of the wired network. You can get stream and decode the video on the video wall when Wi-Fi is enabled if no wired network can be accessed.

Before you start
The Wi-Fi is disabled by default. You must enable DHCP first on the WLAN Settings interface.

Step 1 On the Remote Configuration interface, click Network > Wi-Fi and click Configuring the Wi-Fi Settings tab to enter the Wi-Fi Settings interface.

![Figure 10-61 Wi-Fi Settings](image-url)
Step 2 Check the checkbox of **Enable** to enable Wi-Fi.

Step 3 Input an effective **SSID**.

Step 4 Click **WLAN Settings** tab to enter the WLAN Settings interface.

![Figure 10-62 WLAN Settings](image)

**Step 5** Select the **NIC Type** to **Auto-Switch** and check the checkbox of **Enable DHCP**. Click **Save** to save the settings and the device will reboot to enter the Wi-Fi mode.

**NOTE**

If you want to enable Wi-Fi, you must select NIC Type to Auto-Switch. In this mode, if wired network cable is connected, wired network will be connected by priority. If wired network cable is not connected, the configured Wi-Fi will be connected.

**Step 6** After the device reboots, enter the remote Wi-Fi settings interface. Click **Select** to select a Wi-Fi from the list and click **Save** to enable the selected Wi-Fi.

![Figure 10-63 Select Wi-Fi](image)
Step 7 Select one **Key** for activation. 4 keys can be selected. Input the key and you can check the checkbox of **Display Password** to show the clear-text password.

**NOTE**

8 to 63 ASCII characters or 8 to 64 hexadecimal characters are allowed.

Step 8 Click **Save** on the Wi-Fi Settings interface to save the settings.

**NOTE**

- If wired network cable is connected to the device when the Wi-Fi is enabled, wired network will be connected by priority. But the decoding capability will conform to the configuration in the Wi-Fi mode.
- In Wi-Fi mode, up to 16 channels can be decoded with up to 1080p resolution of each channel and the maximum bandwidth is 64 Mbps.
Chapter 11 Display via Wi-Fi Connection

Purpose

With the Wi-Fi module connected, the DS-6900UDI supports displaying the signal from mobile phone or pad via AirPlay (iOS) or DLNA (Android) to the video wall or other display units.

Step 1 Insert the Wi-Fi module to the DVI video input connector on the rear panel of the device.

Step 2 Use your phone or pad to search and connect the Wi-Fi network (default ID: DIRECT-TV-DONGLE-XXXXXX, default password: 12345678)

Step 3 Open the browser of your phone or pad and input https://192.168.211.161 in the address field to enter the settings page.

![Settings Page](image)

Step 4 Configure the HDMI Dongle parameters, including the Name, Hotspot Password, Device Display Output and the Soft-Ap Frequency.

**NOTE**

The Soft-Ap Frequency parameter must be consistent to the phone or pad performance.

Step 5 Turn on the AirPlay (iOS) or DLNA (Android) to start playing the signal from the phone to the connected display unit. Please refer to the user manual of your phone for the details of AirPlay or DLNA instructions.

12.2 FAQ

- Why cannot ping the decoder?
  - Check the cable and the switch.
  - Please refer to Chapter 4 to configure the IP address of the decoder.

- Why cannot connect the decoder with client software?
  - Check the decoder IP address.
  - Cable is connected.
  - User name and password of decoder are correct.

- Why cannot play back the record files in DVR with decoder?
  - Check the DVR network connection.
  - Check the parameters of the playback file.
  - Check if there are files existed in the selected time duration.

- Why cannot decode the stream transported by stream media server?
  - Check the network connection between decoder and stream media server.
  - Check if the stream media server port is connected with the port added on decoder.

12.3 Summary of Changes

12.3.1 Version 2.1.0

**Added:**

- Supports two-window division mode.
- You can double click the roaming window to zoom in or out for one roaming window or divided roaming sub-window.

**Deleted:**

- HiDDNS is not supported.
